1. script

```
pipeline {
    agent any
    stages {
        stage('Check Docker version') {
            steps {
                sh "docker --version"
                sh "docker pull saverisusarla/my-angular123:1.0"
                sh "docker images"
                sh "docker swarm init"
                sh "docker node ls"
                sh "docker service create -p 80:80 --name myService
saverisusarla/my-angular123:1.0"
                sh "docker service ls"
            }
        }
    }
}
```

2. Dockerfile

```
FROM nginx
COPY dist/angular-docker/ /usr/share/nginx/html
```

3. app.component.html

```
<div>
  <h2>Welcome to Angular project created by Saveri Susarla</h2>
</div>
```
